Instructions

- This HTML document sets up a responsive card slider.
- It includes several cards, each containing an image, a name, a description, and a button (doing nothing but just for showcase).
- The slider allows users to navigate through the cards using arrow buttons or pagination dots.
- The design is responsive, adjusting layout and styles for different screen sizes.
- The JS Code is used to enable smooth sliding transitions and interactive navigation.
- We have also provided you with the Images which you can see in the images folder
